Technical Solutions Engineer

Technically-grounded engineer with 2+ years in a customer-facing technical role, onboarding clients and APIs onto a production gateway platform backed by a large-scale relational database. Skilled at translating customer integration requirements into working technical solutions, presenting technical work to engineering and business stakeholders, explaining technical tradeoffs in clear, non-technical terms, and operating comfortably across release cycles and environments.

CORE STRENGTHS

Customer-Facing: Client onboarding, API integration support, technical troubleshooting, stakeholder communication, requirements translation, live presentations/demos

Technical Foundation: REST APIs, OAuth 2.0 (OAuth2) authentication, mTLS, API Gateway platforms, large-scale relational databases, Kubernetes workflows

Languages & Tools: Java, Python, JavaScript, SQL, GitLab, AWS, Splunk, Postman, Bruno

AI-Assisted Tooling: Experience building with Claude, Codex, and the OpenAI API, including hands-on prompt engineering, to accelerate delivery

EXPERIENCE

Spectrum — Software Engineer II, API Gateway / PINXT

May 2024 – Present

- Serve as a technical point of contact for client and API onboarding onto Spectrum's API Gateway, translating customer integration requirements into implementation changes, access configuration, and validation steps.
- Onboarded and supported 50+ customers this year across 7 APIs onto gateway services end-to-end, from requirements gathering through release-ready configuration.
- Partner directly with developers, testers, and business stakeholders to clarify requirements, troubleshoot live gateway and authentication issues, and keep integrations moving through test and release environments.
- Led cross-team triage of a live release incident, coordinating with 3 project managers and a principal engineer via traceIds and Kubernetes pod diagnostics to isolate root cause and restore service.
- Explain OAuth2 and mTLS authentication concepts to clients and internal teams with varying technical backgrounds during onboarding and troubleshooting conversations.
- Act as de facto internal solutions engineer for our dev/stable environment, which other teams rely on as a live integration source, diagnosing issues before they affect downstream API consumers.
- Presented a proposed change to the team's data-driven test framework and reported on overall project progress to engineering stakeholders.
- Work daily against a large-scale production database spanning 100+ client records, client secrets, and pipeline configurations underpinning the gateway platform.
- Review approximately 5 merge requests per day and support day-to-day client/tester access enablement, issue resolution, and release coordination across test, staging, and production environments.

Spectrum — Software Engineer Intern, API Gateway

Summer 2023

- Built internal tooling to help developers check Kubernetes cluster status before restarts and deployments, reducing guesswork during release windows.
- Created a self-service PKCE / code verifier generation tool so developers could generate test credentials without engineering support.
- Learned production-oriented API gateway practices while supporting development and deployment workflows.

PROJECTS

Daily History Notifier | Python, JavaScript, Wikimedia API, Spotify API, OpenAI API

- Designed a complete product experience end-to-end — from concept to daily automated delivery — integrating four external APIs (Wikimedia, Spotify, OpenAI, webhook services) into one user-facing workflow.
- Built delivery support for multiple end-user channels (Discord, Slack, generic webhooks, GitHub Issues), demonstrating ability to design for varied user/customer needs.

Local Deal Alert Platform | Python, JavaScript, SQLite, Supabase, Auth

- Designed and built separate shopper and business user flows, translating two distinct customer personas' needs into working product features.
- Planned a migration path to a hosted, production-grade backend (Supabase), including security policy design — mirroring the kind of technical scoping conversation used in solutions engineering.

EDUCATION

University of Colorado Boulder — B.S. Computer Science, Minor in Computer Engineering | May 2024 | GPA: 3.8/4.0 | Dean's List

Relevant Coursework: Database Systems
